4CH temperature controller packed in one compact module

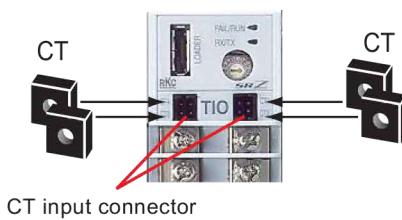

● Compact

Width 30mm, depth 85mm (connector type : 76.9mm) compact design with 4ch control type.

● 4 CT inputs and 4ch controls in one module

4ch Z-TIO module can have 4 CT (Current transformer) inputs.

Temperature Control Module : Z-TIO
(4ch or 2ch control)

Digital Input/Output Module : Z-DIO
(8 inputs and 8 outputs)

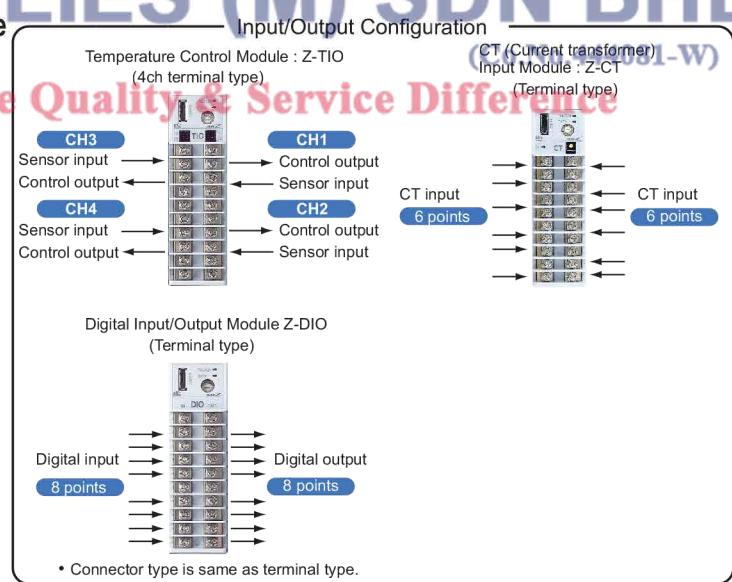

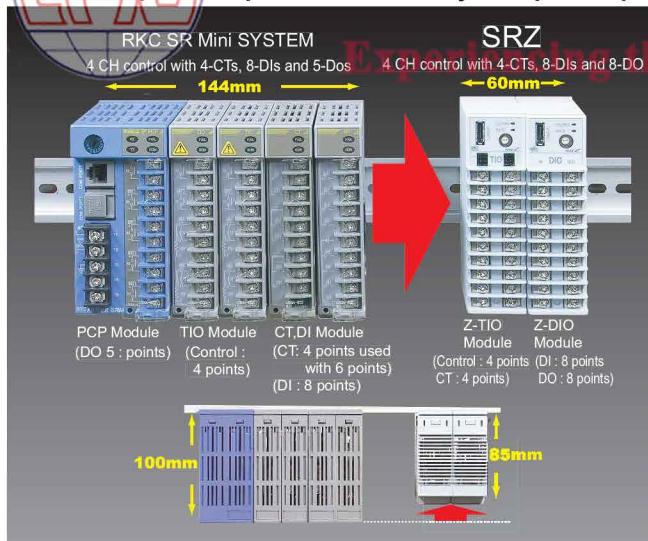

CT (Current transformer)
Input Module : Z-CT
(12 inputs)

Communication Extension
Module : Z-COM
(High-speed communication gateway)

● Ultra compact - requires substantially less panel space

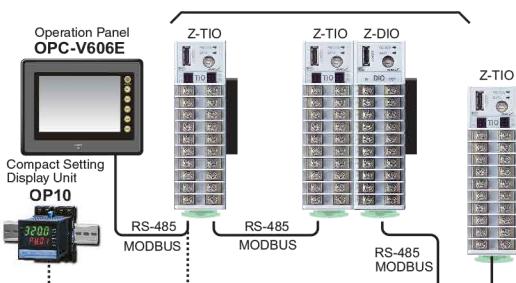

Flexible temperature control system configuration

● Distributed installation

Modules can be remotely distributed by connecting them via RS-485 communication. Up to 16 Z-TIO (64 CH) and 16 Z-DIO (128 DI/DOs) modules can be connected to one serial communication line by distributed installation.

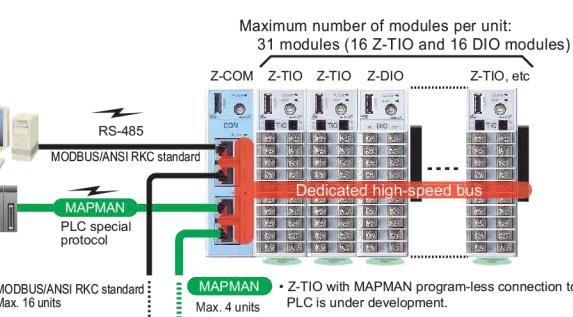

The maximum number of modules connected by distributed installation is 31 modules.

● High-speed communication with large systems, Program-less connection to PLCs

Z-COM module can manage data from connected control modules via high-speed bus connection. MAPMAN program-less connection to PLC is also available.

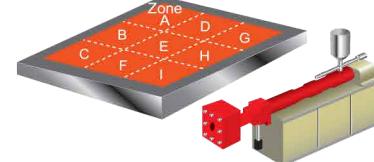

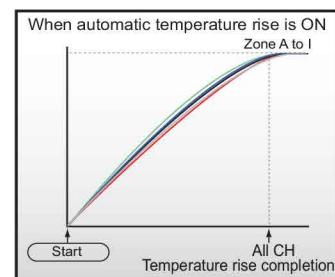

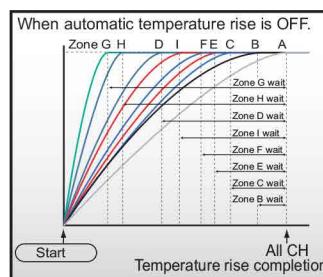

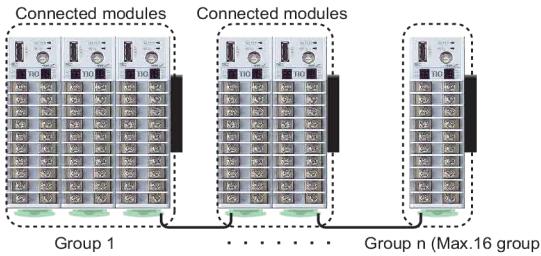

Program-less connectable PLCs: Mitsubishi Electric MELSEC Series

Advanced functions enhance multi-loop control

● Temperature uniformity at ramp-up (Auto-temperature rise function)

The Auto-temperature rise function controls the rate of temperature rise uniformly across all the channels in a specified group. The SRZ system has the ability to have multiple groups within each system. This uniform controlled temperature rise will suppress local overheating and mechanical distortion in the tools, contributing to higher product quality.

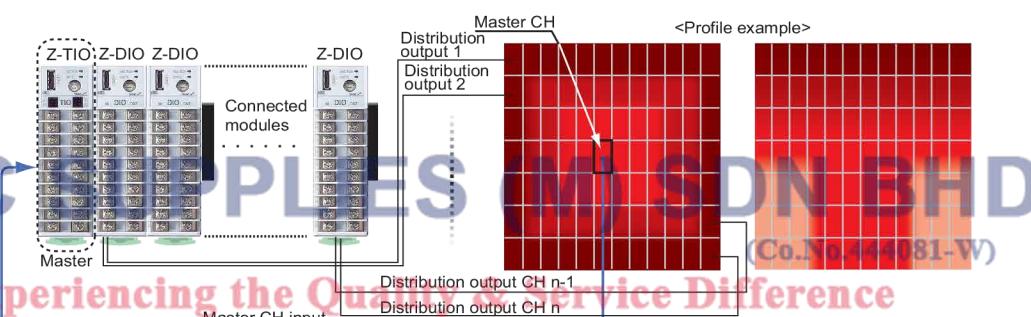

● Multi-loop profile control (Output ratio distribution function)

This function enables one master loop to distribute its output value to multiple outputs of Z-DIO modules. Bias and ratio can be set for each output independently.

A maximum of 187 distribution outputs from one control loop is possible when Z-DIOs and Z-TIOs are used for output ratio distribution.

- Output ratio distribution function works via back plane connected modules.
- Distribution output from DIO module becomes open collector output or relay contact output.

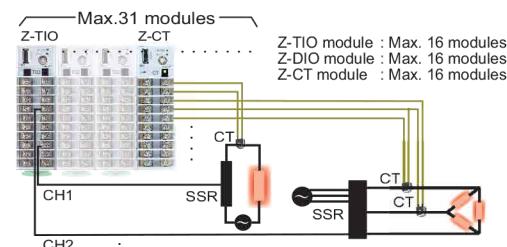

● Automatic SV setting on heater break alarm and heater over current alarm

Set values of Heater break alarm (HBA) and heater over current alarm are automatically set by pressing a front-mounted push button when a heater is on.

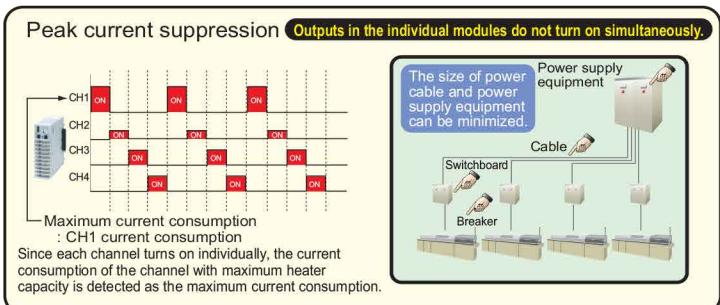

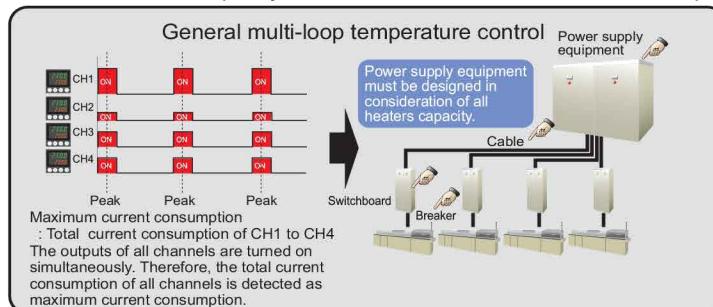

This function is also available for three-phase heater break alarm.

- HBA function of Z-CT module is designed only for time proportional control (On/Off output). Phase control (continuous output) is not available.
- The CT input monitor value indicates the effective value when the heater break alarm function is enabled and output is 100% (heater ON) or 0% (heater OFF.)

● Peak current suppression

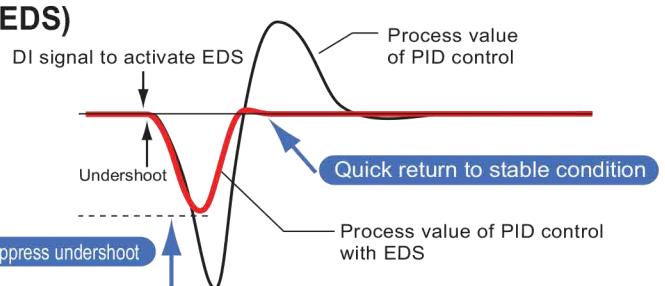

Peak current suppression minimizes the capacity of electrical materials such as power supply equipments, switchboards, power lines, and breakers since this function makes the timing of control output on each channel separate so that the current consumption of the channel with maximum heater capacity is detected as maximum current consumption.

● External disturbance suppression with autotuning (EDS)

EDS with autotuning calculates optimum settings to suppress control disturbance caused by external factors. The function is activated by a DI signal to adjust control output (feed-forward) to compensate for the disturbance.

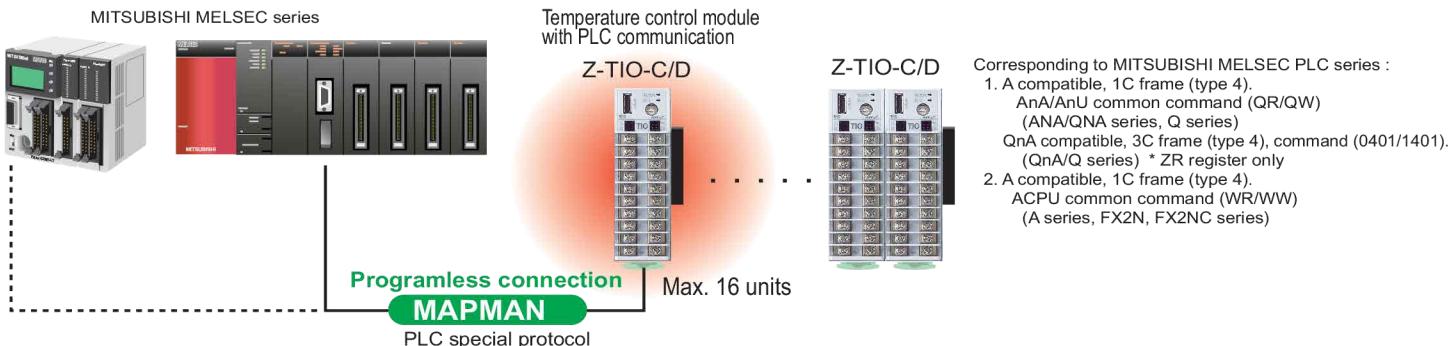

It is suitable for an application in which external disturbance can be predicted, such as wafer-in/out in semiconductor manufacturing equipment, and during injection in injection molding machine.

Communication with a PC via USB port (Loader communication)

Easy parameter setup via USB loader port with Win-UCI software (Loader communication)

The SRZ module has a standard loader port on the front panel to connect to a PC USB port via COM-K (USB communication converter). Using Win-UCI software on the PC, parameter settings can be easily saved on the PC in CSV format, and the same parameter settings are easily copied to other SRZ modules.

Easy data monitoring and logging with Win-UCI software

The Win-UCI software enables data monitoring and logging on the PC via communication terminals of SRZ. When SRZ communication terminals are connected to COM-K (see the diagram below), the USB port can be used on the PC side. Monitor and log data can be exported as an electronic file in CSV format.

* Win-UCI for SRZ is coming soon on the RKC Instrument website (www.rkinst.com).

The Loader port is only for parameter setup

USB communication converter (COM-K)

COM-K can connect communication terminals of SRZ and USB port of the PC

Model :
COM-K-1
(With loader communication cable)
COM-K-N
(Without loader communication cable)

Cable length : 1.5m
(optional, specify in the model code when ordering)

The power to COM-K is supplied from the PC via the USB port so no power supply is necessary.

Cable length : 1m
(COM-K standard accessory)

Input

Universal input

- Number of inputs
4 or 2 channel (Isolated between inputs)
- Input
a) Temperature, Current, Low voltage input group
Thermocouple : K, J, E, T, R, S, B, N (JIS/IEC)
PLII (NBS), W5Re/W26Re (ASTM)
RTD : Pt100 (JIS/IEC), JPt100 (JIS)
• 3-wire system
Low voltage (Input impedance : More than $1\text{M}\Omega$)
0 to 1V DC, 0 to 100mV, 0 to 10mV DC
Current (Input impedance : 50Ω)
4 to 20mA, 0 to 20mA
- b) High voltage input group
High voltage (Input impedance : $1\text{M}\Omega$)
-1 to +1V DC, 0 to 5V DC, 1 to 5V DC, 0 to 10V DC
• Available for feedback resistance input
- Sampling time : 0.25sec
Influence of external resistance : $0.125\mu\text{V}/\Omega$ (Thermocouple input)
Influence of lead resistance : 0.02% of reading/ Ω (RTD input)
• Maximum 10Ω per wire
- Input break action
a) Thermocouple input : Up-scale/Down-scale (Selectable)
b) RTD input : Up-scale
c) Low voltage input : Up-scale/Down-scale (Selectable)
d) Current input : Value around 0mA
e) High voltage input : Value around 0V
- Input short action : Down-scale (RTD input)
Input digital filter : 0.1 to 100.0 sec. (OFF when 0 is set.)
PV bias : -span to +span
PV ratio : 0.500 to 1.500

Control

- a) Brilliant II PID control
• Direct action/Reverse action is selectable
- b) Brilliant II PID control (Heat/Cool type)
- c) Position proportioning control without feedback resistance
• a), b), c) is selectable
• With auto-tuning and start-up tuning (Except for position proportioning control)
- a) Proportional band :
Temperature input : 0 to input span ($^{\circ}\text{C}$, $^{\circ}\text{F}$)
Voltage/Current input : 0.0 to 1000.0% of input span
• Differential gap at ON/OFF control (High/Low individual setting) :
Temperature input : 0 to input span ($^{\circ}\text{C}$, $^{\circ}\text{F}$)
Voltage/Current input : 0.0 to 100.0% of input span
- b) Integral time : 0 to 3600 sec or 0.0 to 1999.9 sec (selectable)
- c) Derivative time : 0 to 3600 sec or 0.0 to 1999.9 sec (selectable)
- d) Cool side proportional band :
Temperature input : 1(0.1, 0.01) to input span ($^{\circ}\text{C}$, $^{\circ}\text{F}$)
Voltage/Current input : 0.1 to 1000.0% of input span
- e) Cool side Integral time :
0 to 3600 sec or 0.0 to 1999.9 sec (selectable)
- f) Cool side Derivative time :
0 to 3600 sec or 0.0 to 1999.9 sec (selectable)
- g) Overlap/Deadband
Temperature input : -span to +span ($^{\circ}\text{C}$, $^{\circ}\text{F}$)
Voltage/Current input : -100.0 to +100.0% of input span
- h) Control response : Slow, Medium, Fast
- i) Ramp-to-setpoint : 0 to span per Time
(Time is settable between 1 and 3600 sec)
Up/Down individual setting
- j) Output limiter : -5.0 to +105.0% (High/Low individual setting)
- k) Output change rate limiter : 0.0 to 100.0%/sec
(Up/Down individual setting)
- l) Proportional cycle time : 0.1 to 100.0 sec
- m) Cool side proportional cycle time : 0.1 to 100.0 sec
- n) Manual reset : -100.0 to +100.0%
- o) Output at Control Stop mode : -5.0 to +105.0%
(Heat side/Cool side individual setting)

Insulation resistance

More than $20\text{M}\Omega$ (500V DC) between measured terminals and ground
More than $20\text{M}\Omega$ (500V DC) between power terminals and ground

More than $20\text{M}\Omega$ (500V DC) between measured and power terminals

Dielectric voltage

750V AC for one minute between measured terminals and ground
750V AC for one minute between power terminals and ground
750V AC for one minute between measured and power terminals

Output

Number of outputs : 4 points or 2 points

Output

- a) Relay contact output, Form a contact
250V AC 3A (Resistive load)
- b) Voltage pulse output, 0/12V DC
(Load resistance : More than 600Ω)
• Power supply and output are not isolated

- c) Current output, 4 to 20mA DC, 0 to 20mA DC
(Load resistance : Less than 600Ω)
• Power supply and output are not isolated.
- d) Continuous voltage output
1 to 5V, 0 to 5V DC, 1 to 10V DC
(Load resistance : More than $1\text{k}\Omega$)
• Power supply and output are not isolated.
- e) SSR (Triac) output, Rated current : 0.5A
f) Open collector output (Sink type)
Load current : Less than 100mA

Event (Alarm) function

Number of events : Up to 4 points per channel

Event type

- Process high, Process low, Deviation high, Deviation low, Deviation high/low, Band, Set value high, Set value low, MV value high, MV value low, Cool side MV value high, Cool side MV value low, FBR value high, FBR value low, LBA (Control loop break alarm), Deviation high between channel, Deviation low between channel, Deviation high/low between channel, Deviation band between channel LBA, Temperature rise completion
• LBA is assignable to event 4.
• Temperature rise completion is assignable to event 3.
a) Hold/Re-hold action is configurable.
Valid for deviation/band/process alarm only.
b) Energized/de-energized action is configurable.
c) Delay timer : 0 to 1800sec
d) Interlock (latch) function is configurable.

Heater break alarm function

Number of alarms : 4 or 2 points (1 point per CT input)
CT type : CTL-6-P-N : 0 to 30A
CTL-12-S56-10L-N : 0 to 100A

Input accuracy

$\pm (5\% \text{ of input value} + 1\text{ digit})$ or 2A (whichever is larger)

Communication function

Communication method : RS-485
Communication speed : 4800bps, 9600bps, 19200bps, 38400bps
Protocol
a) ANSI X3.28 sub-category 2.5B4 (RKC standard)
b) MODBUS-RTU
c) PLC special protocol (Mapman) : Z-TIO-C/D module Corresponding to MITSUBISHI MELSEC PLC series :
1. A compatible, 1C frame (type 4).
AnA/AnU common command (QR/QW)
(ANA/QNA series, Q series)
QnA compatible, 3C frame (type 4), command (0401/1401)
(QnA/Q series) • ZR register only
2. A compatible, 1C frame (type 4).
ACPU common command (WR/WW)
(A series, FX2N, FX2NC series)

Bit format

- a) RKC standard protocol
Start bit : 1, Data bit : 7 or 8,
Parity bit : 1 (odd or even) or none, Stop bit : 1 or 2
- b) MODBUS protocol
Start bit : 1, Data bit : 8 (binary or byte data),
Parity bit : 1 (odd or even) or none, Stop bit : 1

Maximum connection

Z-TIO-A/B: 31 modules
Z-TIO-C/D: 16 modules

Multi-Memory Area (recipe)

Number of areas : 8 areas (recipes) per channel
Stored parameters

Set value (SV), Event set values 1 to 4, LBA time, LBA dead band, Proportional band, Integral time, Derivative time, Cool side proportional band, Cool side integral time, Cool side derivative time, Overlap/Deadband, Manual reset, Control response parameter, Ramp-to-setpoint (Up/Down), Soak time Linking area number

Other functions

- a) Remote setpoint input
- b) Temperature ratio setting
- c) Cascade control mode
- d) Output ratio distribution function
Function which distributes the control output value of the master channel to the Z-DIO/TIO module output.
- e) EDS function
Function which suppresses overshoot and undershoot.
- f) Auto-temperature-rise with learning function
Function which achieves temperature uniformity at ramp-up in the same control group while learning function calculates optimum parameter settings for this function.
Up to 16 groups can be configured within modules which are connected each other by connectors on the base
- g) Peak current suppression function
This function is effective for modules connected each other by connectors on the base
• The peak current suppression function is performed in coupled modules.
- h) Master-slave Mode
With this function, when a mode of Mode-master channel is changed, the mode of all slave channels (preset) will be also automatically changed. Modes can be selected among various mode function such as memory area (recipe).

Z-TIO, Z-DIO, Z-CT, Z-COM Common Specifications

General Specifications

Supply voltage : 21.6 to 26.4V DC (Including supply voltage variation)
Rating : 24V DC

Power consumption
a) Z-TIO : Less than 140mA, Surge current : Less than 10A
b) Z-DIO : Less than 70mA, Surge current : Less than 10A
c) Z-CT : Less than 70mA, Surge current : Less than 10A
d) Z-COM : Less than 30mA, Surge current : Less than 10A

Power failure
A power failure of 4m sec or less will not affect the control action.
• If power failure of more than 20m sec occurs, controller will restart with the state of HOT or COLD start. (Only Z-TIO)

Memory backup
Backed up by non-volatile memory (FRAM)
• Data retaining period : Approx. 10 years
• Number of writing : Approx. 10,000,000,000 times.
(Depending on storage and operating conditions.)

Ambient temperature : -10 to +50°C (14 to 122°F)

Ambient humidity : 5 to 95% RH (Non condensing)

Absolute humidity : MAX.W.C 29.3g/m³ dry air at 101.3kPa

Weight

Z-TIO
Terminal type : Approx 130g (2ch type), Approx 160g (4ch type)
Connector type : Approx 120g (2ch type), Approx 140g (4ch type)

Z-DIO
Terminal type : Approx 150g (DI/DO 8ch type)
Approx 120g (DI 8ch type)
Approx 140g (DO 8ch type)
Connector type : Approx 130g (DI/DO 8ch type)
Approx 100g (DI 8ch type)
Approx 120g (DO 8ch type)

Z-CT
Terminal type : Approx 160g
Connector type : Approx 140g
Z-CT : Approx 110g
Operating environment
Free from corrosive and flammable gas and dust.
Free from external noise, vibration, shock and exposure to direct sunlight.
Compliance with Standards
CE Mark, UL, c-UL, C-Tick mark

- Quick start code 2 tells the factory to ship with each parameter preset to the values detailed as specified by the customer.

Quick start code is not necessarily specified when ordering, unless the preset is requested.

These parameters are software selectable items and can be re-programmed in the field via the manual.

CT : Current transformer for heater break alarm
Feedback resistance input is used only for monitoring.

<Caution> Voltage / current outputs are not isolated from the power supply voltage.

Screw Size : M3 X 7
Solderless terminal is recommended

*1 : Optional
• For 2CH specifications, connectors CN3 and CN4 are not mounted. *1 : Optional

CT : Current transformer for heater break alarm
Feedback resistance input is used only for monitoring.

<Caution> Voltage / current outputs are not isolated from the power supply voltage.

• Supply the power to only one of the joined modules. When power is supplied to any one of the joined modules, all of the joined modules will receive power.

External Dimensions

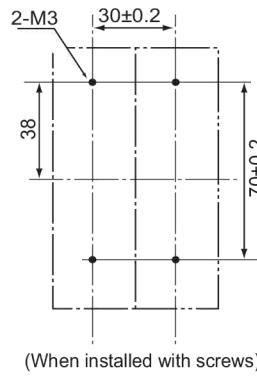

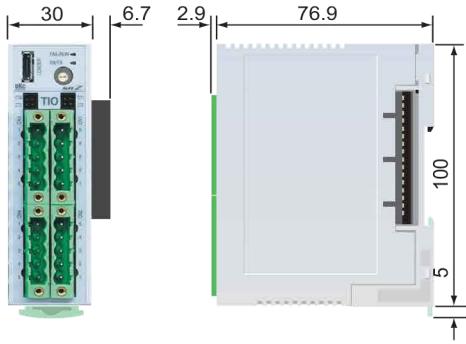

Temperature Control Module (Z-TIO)
 Digital Input/Output Module (Z-DIO)
 Current transformer (CT) Input Module (Z-CT)

Terminal Type

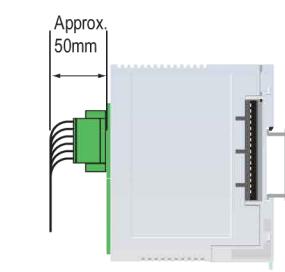

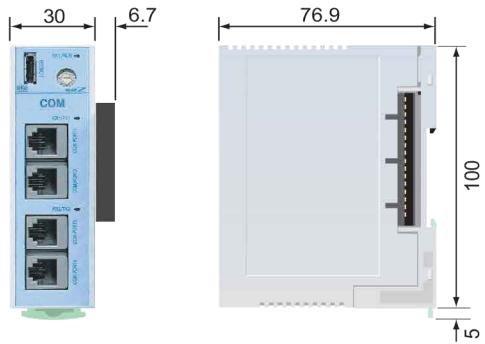

(Unit:mm)

Connector Type

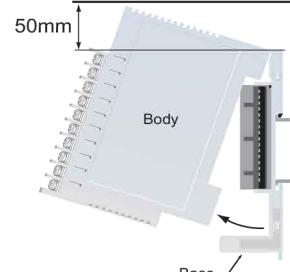

(When installed with screws)

Communication Extension Module (Z-COM)

- Secure approximately 50 mm for the connectors and wiring, depending on the connector type

- Secure approximately 50 mm to remove the body from the base.

Communication Converter Model Code

● DeviceNet communication converter (COM-JH)

| Specifications | Model Code | |
|-------------------------|-----------------------------------|------------|
| | COM - J | H - □ * 02 |
| Type | DeviceNet communication converter | H |
| Connector for DevineNet | Open connector (Unshielded type) | N |
| Available controller | SRZ | 02 |
